

Diaz Village – Borehole Water Distribution & Scheduling

Borehole water is delivered to a dedicated outside wall mounted tap on all houses in the complex during fixed times every day. This is done on a rotational basis, alternating between ODD dates of the month (1st, 3rd, 5th etc.) and EVEN dates of the month (2nd, 4th, 6th etc.) where half of the complex will receive water in the mornings from 06h00 -> 12h00 and the other half will receive theirs in the afternoons from 14h00 -> 20h00. The split is as follows:

- House units in the northern half of the complex are No's **1 – 4** & **23 – 44**. These receive water on ODD dates in the mornings (06h00-12h00) and on EVEN dates in the afternoons (14h00-20h00).
- House units in the southern half of the complex are No's **5 – 22**. These receive water on EVEN dates in the mornings (06h00-12h00) and on ODD dates and in the afternoons (14h00-20-00).

Refer to our [Borehole Water Usage Policy](#) for further information.

Please Note - Water from our borehole is unfiltered groundwater that is **not potable** and is thus not fit for human consumption.
